Presidents Council on Food Safety
Docket No 97N-0074, FDA Dockets

Re: Legislation to stop the spread of drug-resistant bacteria

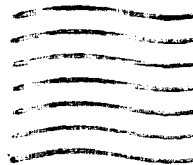

It is know that more than 40% of all antibiotics sold in the United States are administered to farm animals to promote growth and prevent disease in unnaturally over-crowded factory farms. If this non-medicinal use of antibiotics for farm animals were prohibited the anticiotics themselves would become effective and reduce animal suffering.

Sincerely
Mrs. Joseph Saeva
